

Your teachers already trust Class Companion. Panorama makes it a district-wide asset.

Class Companion is now part of Panorama's AI platform and your teachers keep exactly what they love while getting so much more.

AI summary

Last updated 7/23/2025, 1:45 PM

Strength

Strong Thematic Analysis

These students demonstrated a strong ability to synthesize a central theme with clear and relevant textual evidence, indicating a comprehensive understanding of the chapter.

Students: [Refugio Boots](#), [Ronald Diaz](#), [Myles Hattman](#), [Robert Huntzinger](#)

Area for improvement

Developing Connections Between Evidence and Theme

These students identified relevant details from the text, but did not explicitly state the relationship between the evidence and their thematic claim. A key area for growth is to practice articulating how each piece of evidence serves to prove or support their central argument.

The Bigger Picture

Your teachers adopted AI early. They found something that worked; a tool that made giving feedback to students faster and more targeted, differentiation more manageable, and assessment more meaningful. That foundation is expanding.

Over the past year, we've rebuilt Class Companion as part of Panorama, our broader platform that connects what happens in classrooms to district insight and action. Your teachers keep the workflow they rely on. What's new is that their workflows now connect to the bigger picture of student support.

That's why this transition is a district-level decision, and why we need you in the room.

What your teachers **keep**

- ✓ AI-supported scoring and feedback
- ✓ Rubrics and structured assessment
- ✓ The workflow they already trust

This isn't a decision teachers can make alone. The districts moving forward with purpose are the ones with an administrator in the room early, asking the right questions and building a plan for their team.

What your teachers **gain**

- ✚ **Panorama Solara:** a broader AI platform for chat-based, targeted student support, and purpose-built tools aligned to your district's workflows
- ✚ Faster next steps after scoring, student grouping, and plan differentiation all without switching tools
- ✚ Holistic student content recommends scaffolded supports for learners who need it, without changing rigor
- ✚ AI that aligns with your district, not a workaround your team has to manage

Why It Matters

Most AI tools in classrooms today do one thing well: they help individual teachers move faster. That's valuable. But speed without direction isn't a strategy, and point solutions that operate in isolation eventually become the district's problem.

Panorama Solara is different because it connects what's happening in the classroom to what matters at the system level. What a teacher sees in a student's writing connects to the insights a counselor needs, the holistic student profile, and the student support and interventions recommended. It's what makes Solara a platform, and not just another tool.

For your district, that means student data working across instruction, support, and intervention. AI that strengthens your existing workflows rather than running alongside them. One platform that grows with your AI strategy instead of a collection of disconnected point solutions.

The Three Changes

Connected Data

Student data powers targeted recommendations and intelligence across instruction, student support, and intervention.

Real Coordination

What works in one classroom can inform decisions across schools, giving leaders the visibility to act at scale.

One Platform

Grows with your AI strategy — teachers, counselors, and leaders work in one, unified place.

Real Outcomes, Not Hype

12 hrs

saved per week on planning and differentiation

15-17%

improvement in ELA CAASPP scores (*Upland USD, CA*)

2,000+

districts trust Panorama nationwide
